Electrofusion fittings and couplers

Electrofusion fittings

In addition to our electrofusion couplers, in our extensive range you will also find electrofusion fittings. The compact build of short spigot fittings paired with the simple and safe joining technique of electrofusion couplers makes electrofusion fittings so unique. They were developed especially for pressure class conform applications and grant a highly flexible and quick installation on account of the compact design. As a result of that and the reduced number of welds a major time saving can be gained.

The reduction of component parts (one electrofusion fitting instead of two couplers plus spigot fitting) is not only resource-saving, but also brings a direct price advantage.

Quality and Reliability

Produced in accordance with the standards EN 12201-3 and DIN EN 1555-3, STAR electrofusion fittings comply with the most demanding quality standards. Thus quality and reliability are ensured to the highest degree.

Universal weldable

STAR electrofusion fittings and couplers are weldable with all universal electrofusion units. We are also pleased to offer you our universal electrofusion units HST 300 Print + 2.0 or HST 300 Pricon 2.0

Delivery program

- Dimensions up to d 1400 mm
- SDR 26 / 17 / 11 / 9 / 7,4

Overview E-Fittings

 DV-8613CL0290

We provide you with high-quality and efficient solutions for applications in supply and disposal. In addition to our high-quality standard and special fittings, seamless bends, electrofusion fittings, pipes and hollow bars and solid rods, we also offer suitable welding equipment for joining and welding technique.

Our extensive product range gives you the possibility to obtain every-thing from a single source and for almost every building project. See for yourself.
